(a) scatter against wave count
predicted $0.806\,N^{-1/2}$
model $\sqrt{A/N+B}$
measured
finite-map floor $\sqrt{B}$
seed-to-seed scatter $\sigma_{\Delta T}/\langle\Delta T\rangle$
number of waves N
(b) the floor is set by area alone
$16.4/\sqrt{\text{area}}$
384×480
768×240
slope -0.509 ± 0.027
(predicted -0.500)
floor $\sqrt{B}$
map area $W\times H$ (pixels^2)
(c) each geometry on its own law
both dims: -1.00
fitted -0.983 ± 0.071
width only: -0.50
fitted -0.556 ± 0.059
height only: -0.50
fitted -0.494 ± 0.059
floor $\sqrt{B}$
scaled dimension (pixels)
